Targets of CALYPSO South

CALYPSO South is committed to put technological advancement and scientific endeavour at the service of humanitarian responses, reducing risks in sea faring, and protecting the marine environment.

CALYPSO South follows the trail of the previous CALYPSO and CALYPSO FOLLOW ON initiatives, with the overall objectives of (i) extending the CALYPSO HF radar network coverage to the western part of the Malta-Sicily Channel and the southern approaches to the Maltese archipelago, (ii) installing weather stations for integrated port safety applications in key ports in Malta, Gozo and Southern Sicily, (iii) developing new monitoring and forecasting tools, and (iv) delivering tailored operational downstream services to assist national responsible entities in their maritime security, rescue and emergency response commitments.
